Customizing Statistical Reports Using ODS and Proc Template

Joy Munk Smith, North Carolina State University
Sandy Donaghy, North Carolina State University

Abstract: The Output Delivery System (ODS) provides nearly limitless flexibility in formatting statistical output. All statistical output can be stored in SAS data sets and templates created with Proc Template can be used to create customized reports. This tutorial will cover using ODS to creating SAS data sets from statistical procedures, and using Proc Template to create templates for displaying statistical output. The creation, storage, and use of custom templates will be covered. This material will be covered using examples and will include an online demonstration.
