Putting Lipstick on Legacy SAS® Code

Myron Chandler, SAS Institute Inc.

ABSTRACT

Any company that has used SAS for a significant amount of time will have years of time and effort invested in the development of their core business applications. As hardware and different technologies become dated, the logic of those core systems often does not and still maintains much of its original value.

This presentation will focus on how to leverage the value of that business investment with one of today's most useful technologies: web services. I will go through a real-life example of taking a SAS/AF-based application and making it accessible to the web using SAS and Java.

No paper was available for publication in the Proceedings.
