ABSTRACT

The ODS Graphics Designer is a GUI-based interactive tool for users who want to create custom graphs quickly without any programming. This video presentation will show you how you can combine different types of plots, including statistical density and distribution plots, insets, and legends to create the graph you need. Use this flexible tool to incrementally build single-cell or multi-cell graphs adding rows and columns as you go. Build data-driven classification paneled graphs as easily as simple scatter plots. Start from scratch, or build on top of graphs from a customizable gallery, adding your own custom graphs to the graph gallery for future use, or to share with others.

No paper was available for publication in the Proceedings.
