Graphs in Flash, using Graph Template Language (GTL)

Himesh Patel, SAS Institute Inc.

ABSTRACT

Graphics Template Language offers many opportunities for application developers to package simple or complex custom designed graphs into stand-alone template libraries. In SAS® 9.2, users can generate static output only through Java rendering. Come take a peek into future rendering through the use of Adobe Flash. You will be able to use your current GTL code to generate interactive graphs using Flash technology. Once data is visually analyzed, you will be able to publish the graphs for presentation or report.

No paper was available for publication in the Proceedings.
